

APPLIED AI · ONE-DAY HACKATHON

Applied AI Hackathon.

Law-Di-Gras · San Diego · October 2nd, 2026 · Hosted by Swans

Wifi: **Hackathon** Password: **SWANS2026**

WELCOME · LAW-DI-GRAS

Welcome to San Diego.

We're Swans. We build AI for personal-injury law firms in the US, and today's challenge isn't invented for a hackathon. It's a real problem our clients would pay real money to solve.

Today's about seeing how far you can take AI in just six hours.

Today is a **build day and a social day**. Food, coffee, and a conference full of trial lawyers upstairs. The challenge is sized for a good day, not a death march.

WHAT'S IN IT FOR YOU

Three reasons to build.

PRIZES

1st **\$2,500**

2nd **\$1,500**

3rd **\$1,000**

Top 3 shown on the main stage tonight, before the concert.

Top finishers: **\$500** tickets for tomorrow's private concert.

Every coder: a free ticket to tonight's private concert.

OWNERSHIP

100%

Of what you build is yours. Take it, ship it, put it in your portfolio.

YOUR JUDGES

**Trial attorneys
and AI builders.**

The real buyers of this software, and people who know what a good AI product looks like.

WITH THANKS

Our sponsors, and this afternoon's judges.

THEY HELPED US RECRUIT

kiln. Austin Carter

Florin Diumea

All the law you need.

01

Someone gets hurt

A car crash is the classic case. They hire an attorney. The attorney only gets paid if the client wins.

02

Doctors treat on a promise

Medical providers treat the client now and get paid from the settlement later. It's called a lien. They are betting on the case too.

03

The case takes years

Records pile up, insurers negotiate, courts move slowly. The file grows: notes, emails, tasks, documents. Thousands of pages.

04

Two sides, one case

The firm

The medical providers

Both need to know where the case stands. Right now, neither can see it.

Small tip: bills (liens) are usually negotiated down at the end, so the client takes home more money.

THE PROBLEM

The system has all the information. It's just not easy to digest.

Every note, email, task and document is captured. Case management systems even give you a dashboard per case. And still, "what's been happening on this case?" means reading everything, or asking a colleague who was there.

SOLVED

Capturing the case. The notes, emails, dates, contacts and documents are already in the system.

TODAY'S PROBLEM

Digesting it. Turning a live case file into something a human absorbs in ninety seconds. Nobody has solved this well.

Two sides. Zero visibility.

The **firm** reconstructs every case by hand. The **medical providers** treating the client on lien can't see where the case is, or whether there's coverage behind it.

So both fall back to the same tool: **email, with no intelligence in it.**

THE CHALLENGE

The goal of this challenge.

Build a solution that acts as a dashboard in order to:

01

Get the internal team members of a firm up to speed on a case.

02

Improve communication and visibility on the case for the medical providers involved in the client's treatment.

Both halves. How you get there is yours.

This goes beyond an AI chat you ask questions of: the point is a visual digestion of everything already in the case, so the attorney and the providers get up to speed without having to know what to ask.

In their own words.

HEARD FROM THE PEOPLE YOU'RE BUILDING FOR

FROM ATTORNEYS

- "Get me up to speed on a case and show me what's happened recently, without me having to ask anyone."
- "What changed since I last opened this matter?"
- "Out of three hundred entries, show me the ten that matter."
- "Sometimes I need to be up to speed in two minutes. Sometimes I need to dig into everything."
- "If a date is on screen, I need to see where it came from."
- "I'd like to click on anything and open the note, document or email it came from."
- "I want to see the client's picture as soon as I open their matter."
- "Somewhere in a 200-page scan are my client's primary injuries."
- "When did anyone last actually talk to the client?"

- "Don't digest the whole case with AI again every time someone on my team opens it."
- "What's overdue, what's coming, and what's waiting on someone else?"
- "The two KPIs I care about most: what is the case worth, and what coverage sits behind it."
- "How much has the firm already spent on this case?"
- "What did we share with this provider, and has anyone in their office opened it?"
- "I want the treating doctors to see where the case is without handing over my whole file."
- "Let me adjust what the provider sees before I send it."
- "I want a secure way of sharing part of my case with the providers treating my client."

FROM MEDICAL PROVIDERS

- "I'm treating this patient on a lien. Is there coverage behind the case?"
- "Is this case even still alive? I've chased money on cases that settled a year ago."
- "Tell me when the case moves. I shouldn't have to email for that."
- "I only ever see the records I sent. I'm treating this patient with one eye closed."
- "What does the firm need from my office right now?"
- "Is my patient still showing up to treatment?"

This is a menu, not a spec. **Build the ones you believe in, and build them well.**

SHARING WITH MEDICAL PROVIDERS

What providers see. What they don't.

A provider isn't part of the firm, so a lawyer wouldn't share the whole case.

SHARE

Status changes

Bills and records

DON'T SHARE

Case strategy

Anything confidential that isn't relevant to the provider

Not every attorney will choose to share the same information.

Not sure where the line is? **Ask the attorneys in the room.**

WHAT EXISTS TODAY · 1 OF 3

Good dashboards. Not good enough.

The screenshot shows the Clio Manage dashboard for matter 25132-Abreu. The dashboard is divided into several sections:

- Financial:** Includes 'Work in progress' (\$0.00), 'Outstanding balance' (\$0.00), and 'Matter trust funds' (\$0.00). It also has buttons for 'Quick bill', 'View bills', and 'New request'.
- Time:** Shows a time log for 7.20h with an 'Add time' button.
- Expenses:** Includes an 'Add expense' button.
- Details:** A sidebar with various filters like Tags, Matter description, Responsible attorney, Responsible staff, Permissions, Blocked users, Originating attorney, Matter notifications, Practice area, and Matter stage.
- Conflict checks:** A section with a 'Link conflict check' button and a 'Run conflict check' button. It currently shows 'No conflict checks associated with this matter.'
- Custom fields:** A section with a 'Show more' button. It displays 'Estimated Case Value' (\$18,000 to \$25,000), 'Medical Specials To Date' (\$31,374.53), and 'Liability Assessment' (Clear, Rear-end collision into a stopped vehicle. Adverse driver).
- Contacts:** A section with an 'Export' button. It lists 'Clients (1)' and 'Related contacts (15)'. The 'Clients (1)' section shows 'Jesus Abreu' with contact information. The 'Related contacts (15)' section shows 'Cohen & Kramer, M.D., P.C.' and 'Cohen & Kramer Physical Therapy PC'.

Clio Manage. Genuinely good software, but getting up to speed still means walking tab by tab through notes, documents, tasks and emails.

DEFENSE INSURANCE

CasePeer. Same story: counts and lists on the dashboard, the detail one jump away, the story assembled by hand.

WHAT EXISTS TODAY · 3 OF 3

The screenshot displays the Lawmatics software interface for a case named "Carrasco - Criminal Defense" (Dakota L Carrasco). The interface is divided into several sections:

- Header:** Includes a search bar, a play button icon, a timer (00:00:00), a user profile (Nolan, 561h), and a "CREATE NEW" button.
- Case Information:** Shows the case name, description ("Accused of dog theft (>\$10,000)"), and a status bar with "Pending", "Agreement Sent" (highlighted), and "Invoice Sent".
- Matter Details:** Includes the practice area (Criminal Defense), estimated case value (\$20,000.00), source info (Cremin LLC), and last contacted date (1 days ago). It also features tags for "VIP" and "Urgent".
- Matter Relationships:** Lists related parties (Jamika) and opposing counsel (Leia), with an option to "Add Relationship".
- Essential Information:** Provides primary phone (8008831105) and email (dakota@test@lawmati...) contact details.
- Activity Timeline:** A central section showing upcoming events and updates. It includes an "Appointment Scheduled" for 3 years from now, a "Statute of Limitations" update, and a "Data Updated" entry for 03/12/2026 4:07pm PDT.
- Tasks at a Glance:** A sidebar section showing "Waiting for Client" and "Retainer Pending" tasks, with a "GO TO TASKS" button.

Lawmatics.

The difference between these screens and a winning submission is everything this morning has been about.

WHERE TO START

Start with the input.

Everything you build today reads from **one case management system: Clio Manage**. Each team works in its own account, you will need to create one now.

- 01 Create a free Clio Manage trial.** Free, no card, a couple of minutes.

- 02 One account per team.** Whoever creates it invites the rest of you in. Only one of you runs the setup.

- 03 Open our setup app and connect your account.**

- 04 Follow its steps.** It loads the Sapini matter, the one case every team in this room is working from.

Ten to fifteen minutes, most of it waiting. Start it first, brainstorm while it runs.

Scan this. Action it later.

Every step, every link, in order, on one page.

YOUR INPUT

One matter. A real case.

Your Clio Manage account will be populated with one personal-injury matter built from a real litigated case file: **Sapini**.

Everything a real case file holds: the parties and providers, the field data, the running conversation, the deadlines, and the documents — including the scans, exactly as firms receive them.

None of this exists in your account until you run the setup. That is step one at 9:00 AM.

RULES

Barely any.

-  Teams of up to three. Solo is fine. Tell us when you submit.
-  Any stack, any tools. AI-assisted coding is the point, not a loophole.
-  You own everything you build. We get to film and showcase it.

THE THREE RULES THAT MATTER

- 1 Everyone builds on one matter: Sapini.** Your build reads it live from your Clio Manage account. Demo it in your video; it is also what we evaluate on.
- 2 We read your repository.** Features and code are verified from it. Hardcoded features are quickly identified.
- 3 Clio is only your input.** Read everything, write nothing: API calls that read are fine, API calls that write or update case data are not. Need a database? Bring your own, outside Clio.

HOW TO SUBMIT

A repo, a clip, and a few straight answers.

- 01 Your GitHub repository.** The repo is the submission — we read it.
- 02 A 90-second clip:** a quick rundown of your solution, on Sapini, and the visuals behind its features. Google Drive link, public access.
- 03 Your tech stack:** built with, running on, and where data lives outside Clio.
- 04 Which AI models run your digestion,** and the approximate cost to run one case. Rough numbers fine — attorneys think per-case.
- 05 Anything you'd like the judges to know?** What you're proud of, your differentiator, where to look first — and anything half-done or hardcoded we should account for.
- 06 Optional:** a live link or install path, if your build has one. **Localhost can win here.** You have six hours, choose your battles.

DEADLINE

4:00 PM

Form in and **all committed work done by 4:00 PM.**

Hard close. No grace window.

Submit early: submission order is presentation order. First in, first on stage.

Submission form
Scan to open

HOW YOU WIN

Four steps to the stage.

4:00 PM

Submissions close: form in, all committed work done. Swans screens every build: does it run, does it work on Sapini, is it generated or hardcoded, how it's engineered. **Top 7 advance.**

5:00 PM

Top 7 present to the judges. You will be **given 4 minutes** to pitch your video to the judges.

5:50 PM

Judges deliberate. **Top 3, ranked.**

~7:00 PM

Top 3 solutions will be shown on the **main stage**, in front of the conference and the final positions will be announced.

Getting into the Top 7 is won in the code. Winning is won on the stage.

THE DAY

The schedule.

8:00 AM	Check-in
8:30 AM	This briefing
9:00 AM	Set up, then build
12:00 PM	Lunch (provided)
4:00 PM	Submissions close, all committed work done. Hard.
4:00–5:00 PM	Swans screening → Top 7
5:00–5:50 PM	Top 7 present to the judges
7:00 PM	Top 3 on the main stage · winners announced · concert

Tonight's concert is for everyone in this room.

WIFI: HACKATHON

PW: SWANS2026

Digest the case. Tell its story. Build something awesome.

All committed work done by 4:00 PM · Top 3 on the main stage ~7:00 PM

We're in the room all day.
